

Bajaj Finserv Liquid Fund

An open ended Liquid scheme with Relatively Low Interest Rate Risk and Moderate Credit Risk.

Data as on 31st August 2026

Portfolio Strategy

The fund endeavours to invest in high-rated securities for investment. Within this context, its strategic inclination lies to generate returns by tactically adjusting fund maturities within the range of 1 day to 91 days by acting on the interest rate and liquidity outlook. The fund's credit allocation approach emphasizes a strong preference for AAA-rated long-term equivalents. There may be limited allocation in AA equivalents. In such allocation, it would be restricted to high-quality issuers where there long-term rating is backed by holistic view of their cash flows, promoter quality, business with fund raising capabilities among others factors

Our prevailing market perspective is that RBI will maintain interest rates at a standstill, choosing to observe the Fed's monetary policy cycle and the potential impact of the monsoon season before undertaking any further adjustments. As a result, short-term interest rates are expected to remain within a confined range. Investors with a 1-3 month investment horizon seeking a high-quality issuer portfolio can consider this fund.

Fund Positioning

Credit Risk →	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Interest Rate Risk ↓			
Relatively Low (Class I)		B-I	
Moderate (Class II)			
Relatively High (Class III)			
B-I – A Scheme with Relatively Low Interest Rate Risk and Moderate Credit Risk			

Quantitative Indicators

Average Maturity¹
38 Days

Macaulay Duration²
38 Days

Modified Duration³
35 Days

Yield to maturity⁴
6.06%

- 1 Modified duration is a formula that expresses the measurable change in the value of a security in response to a change in interest rates. Modified duration follows the concept that interest rates and bond prices move in opposite directions.
- 2 Average Maturity is the weighted average of all the residual maturities of the debt securities held in the fund. Average maturity helps to determine the average time to maturity of all the debt securities held in a portfolio and is calculated in days, months or years.
- 3 The Macaulay duration is the weighted average term to maturity of the cash flows from bonds. In other words, it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond.
- 4 Yield to maturity is the total return anticipated on a bond if the bond is held until it matures. Yield to maturity is considered a long-term bond yield but it is expressed as an annual rate
