- 2 Average Maturity is the weighted average of all the residual maturities of the debt securities held in the fund. Average maturity helps to determine the average time to maturity of all the debt securities held in a portfolio and is calculated in days, months or years.
- 3 The Macaulay duration is the weighted average term to maturity of the cash flows from bonds. In other words, it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond.
- 4 Yield to maturity is the total return anticipated on a bond if the bond is held until it matures. Yield to maturity is considered a long-term bond yield but it is expressed as an annual rate
