

Bajaj Finserv Money Market Fund

An open ended debt scheme investing in money market instruments with Relatively Low Interest Rate Risk and Moderate Credit Risk.

Data as on 30th June 2026

Portfolio Strategy

Bajaj Finserv Money Market Fund is an open ended debt scheme aims to generate regular income by investing in a portfolio of money market instruments with relatively low interest rate risk and moderate credit risk. The scheme focuses on money market instruments with maturities of up to 1 year, such as Commercial Papers, Certificate of Deposits, Commercial Bills, Treasury Bills, Government Securities, call money, and other instruments specified by the Reserve Bank of India. Due to the short maturities of these securities, the scheme exhibits low interest rate risk. Our prevailing market perspective anticipates that RBI will maintain interest rates at a standstill, choosing to wait out the impact of the Fed's monetary policy cycle; the rising upward pressure on inflation, the potential impact of the monsoon season before undertaking any further adjustments. As a result, short-term interest rates are expected to remain within a confined range. Investors with a 3-6 month plus investment horizon seeking a high-quality issuer portfolio can consider this fund.

Fund Positioning

Fund Features

Quantitative Indicators

Modified Duration¹
186 Days

Average Maturity²
198 Days

Macaulay duration³
198 Days

Yield to maturity⁴
6.7%

- 1 Modified duration is a formula that expresses the measurable change in the value of a security in response to a change in interest rates. Modified duration follows the concept that interest rates and bond prices move in opposite directions.
- 2 Average Maturity is the weighted average of all the residual maturities of the debt securities held in the fund. Average maturity helps to determine the average time to maturity of all the debt securities held in a portfolio and is calculated in days, months or years.
- 3 The Macaulay duration is the weighted average term to maturity of the cash flows from bonds. In other words, it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond.
- 4 Yield to maturity is the total return anticipated on a bond if the bond is held until it matures. Yield to maturity is considered a long-term bond yield but it is expressed as an annual rate
