Global Markets and Economy

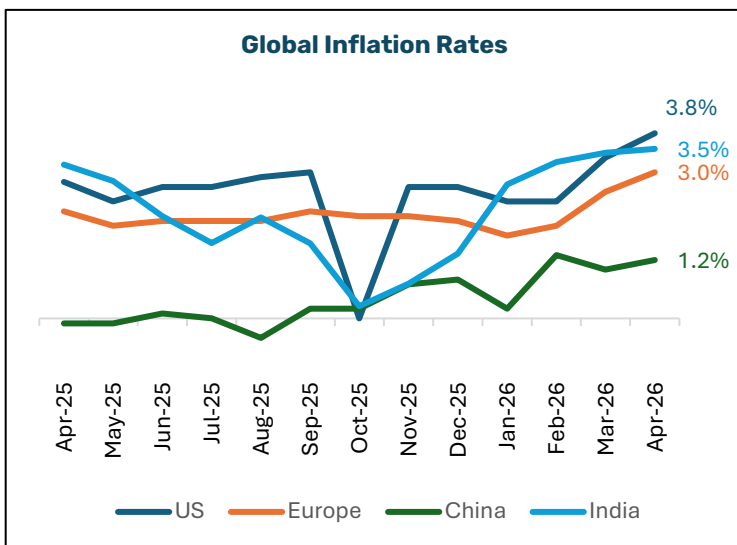

Global Indices 1m Returns (local currency)

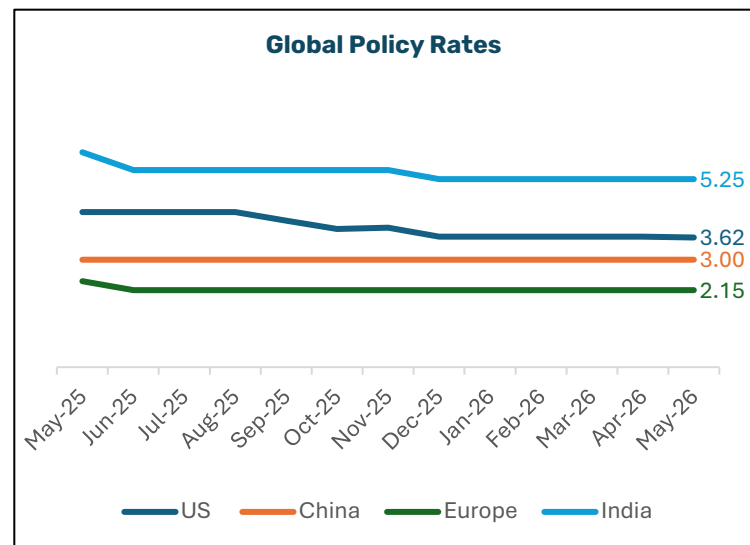

Past performance may or may not be sustained in future.

- Global markets witnessed a sharp divergence in May, with AI- and semiconductor-driven economies such as South Korea, Taiwan, Japan, and the U.S. outperforming.
- In contrast, escalating West Asia tensions lifted crude oil prices and heightened inflation concerns, weighing on oil-importing and emerging markets.
- The resulting risk-off sentiment, coupled with persistent FII outflows, contributed to the relative underperformance of India, China, and Brazil.

Source: Bloomberg. Data as on 30th April 2026 as per the latest available.

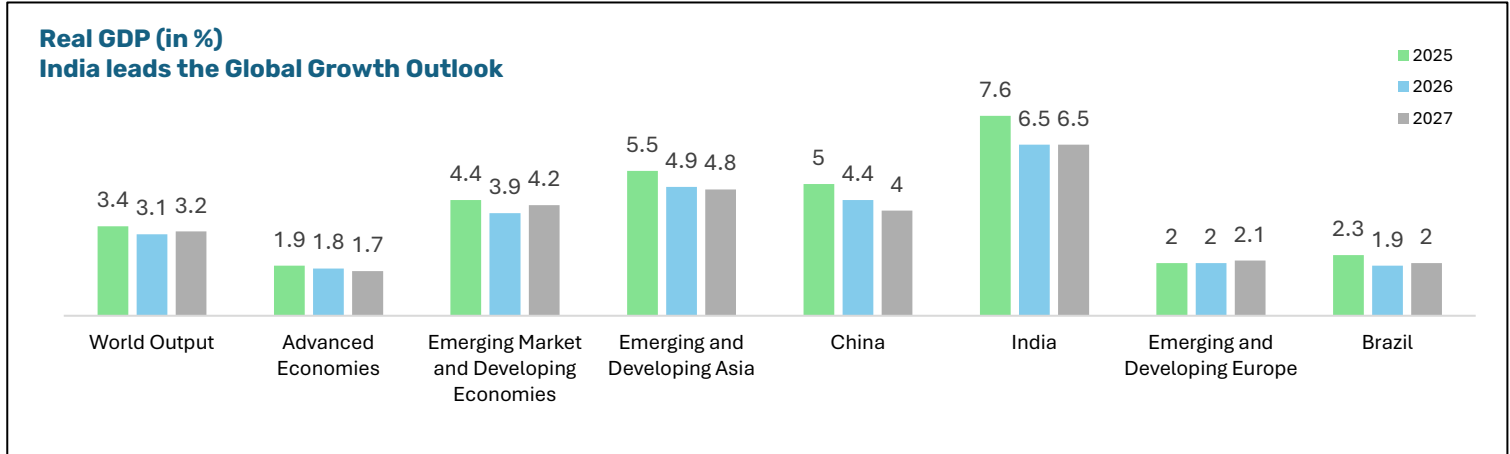

Source: Bloomberg. Data as on 31st May 2026.

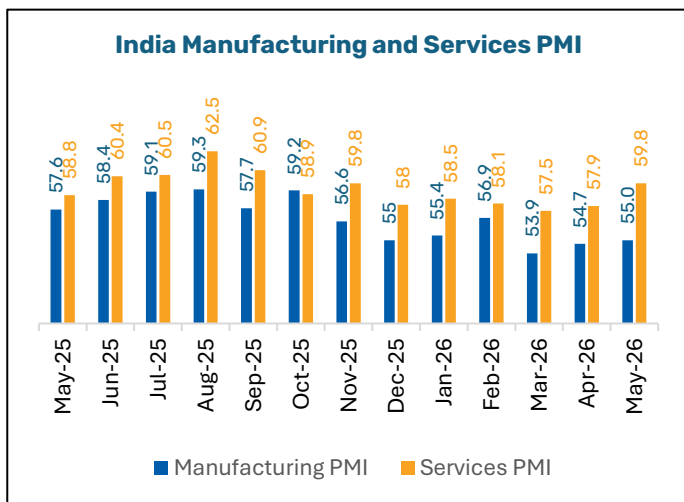

- Rising energy prices and geopolitical tensions have led to a rebound in global inflation, with US inflation climbing to 3.8% and Eurozone inflation rising above 3%, prompting central banks to remain cautious on policy easing.
- While policy rates have largely remained elevated, expectations for aggressive rate cuts have moderated as central banks continue to balance growth concerns against persistent inflation risks.

Indian Economy

Source: IMF, World Economic Outlook. Data as on April 2026 as per the latest report available. Figures for the years 2026 and 2027 are projections.

Source: S&P Global. Data as on 31st May 2026.

India's manufacturing PMI rose to a three-month high of 55.0 in May, driven by stronger domestic demand, infrastructure-led orders, and higher output. Rising input costs from energy and geopolitical pressures persisted, but business confidence remained supported by robust order pipelines and easing cost expectations.

India's services PMI rose to 59.8 in May, the strongest growth since November, driven by robust demand, new client wins, and faster growth in new orders. Employment remained strong, while higher input costs lifted inflation. Despite softer sentiment, businesses remained optimistic about future demand conditions.

PMI: Purchasing Manager's Index

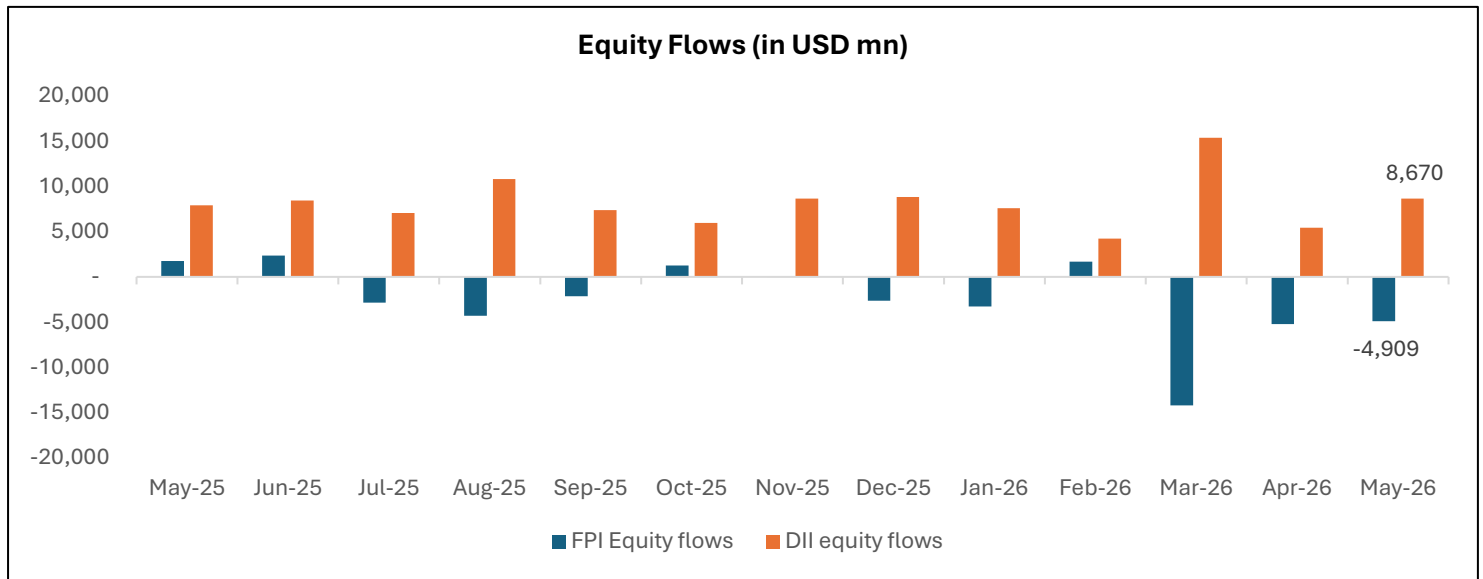

- Brent crude was highly volatile during May, surging above USD 109/bbl mid-month on geopolitical concerns before falling to around USD 84–87/bbl by month-end as supply disruption fears eased, OPEC+ output expectations improved, and markets refocused on global demand conditions.
- Gold prices stayed firm as investors sought safe-haven assets amid heightened geopolitical uncertainty, volatile energy markets, and concerns over global growth.
- The USD/INR remained under pressure as higher crude oil prices increased India's import bill, while risk aversion and foreign portfolio outflows supported the US dollar.

	Price in USD/unit as on 31 st May 2026	1 month change	1 year change
Brent (per barrel)	84.18	-26.12	37.08
Gold (per troy ounce [oz])	4,540	-1.68%	38.03%
USD/INR	95	0.25%	11.10%

The MacroScope

May 2026

Source: Bloomberg, NSDL. Data as on 31st May 2026.
FPI is Foreign Portfolio Investment and DII is Domestic Institutional Investor.

Equity Indices

- Indian equities remained under pressure amid elevated crude oil prices, escalating West Asia tensions, and persistent FII outflows, weighing on large-cap stocks.
- However, mid- and small-caps outperformed, supported by strong domestic liquidity and continued interest in structural growth themes.
- Among sectors, Pharma gained on defensive earnings visibility,
- Metals benefited from firm commodity prices, and Autos were supported by resilient domestic demand.
- In contrast, PSU Banks, Financials, FMCG, and Media lagged amid macroeconomic, margin, and sentiment-related concerns.

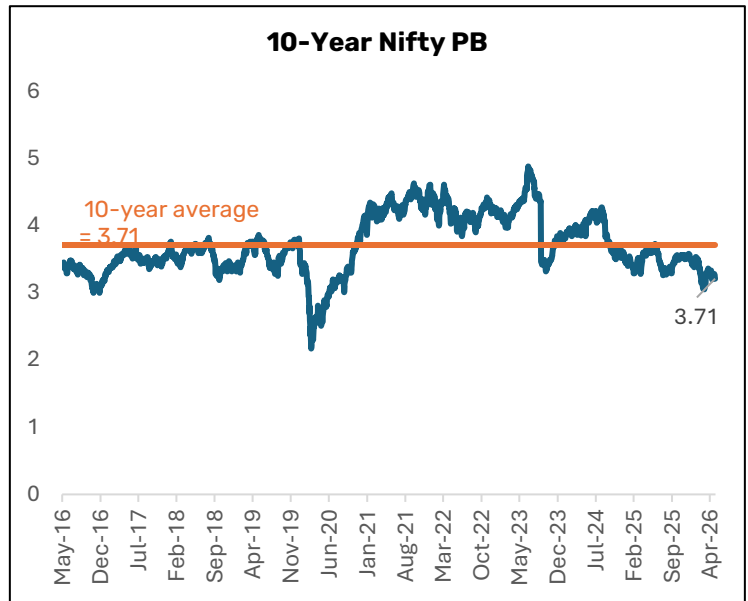

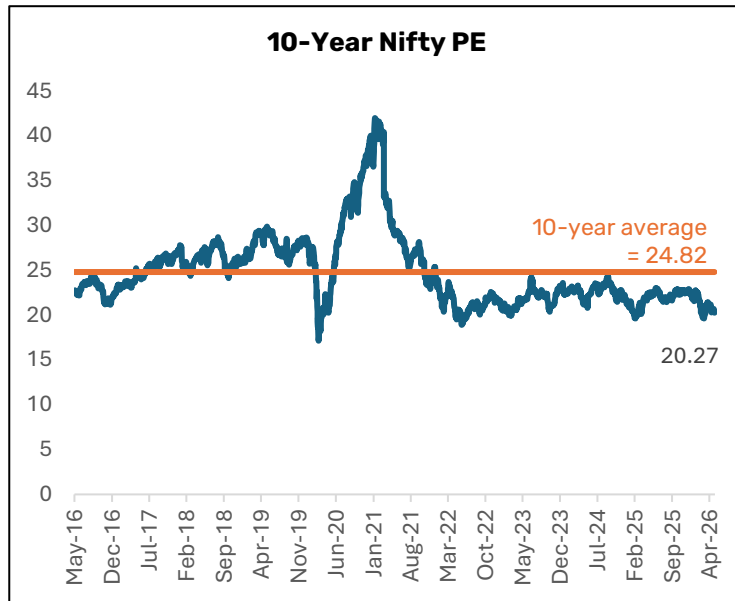

Past performance may or may not be sustained in future.

The MacroScope

May 2026

Source: Bloomberg. Data as on 31st May 2026.

- Nifty valuations have corrected further in the recent selloff, deepening the valuation comfort.
- The setup strengthens the long-term investment case, as improving earnings outlook, scope for FII re-entry, and strong domestic flows position markets for earnings-led compounding rather than valuation expansion.

Equity Outlook

- Indian equities continue to grapple with near-term macro headwinds, including elevated crude oil prices, geopolitical tensions in West Asia, a weaker rupee and sustained foreign investor outflows. However, despite these challenges, India's macroeconomic resilience remains intact and provides a constructive backdrop for equities over the medium term.
- Growth expected to stay above 6%, supported by strong domestic demand, healthy corporate balance sheets and robust domestic liquidity.
- The recently concluded Q4FY26 earnings season highlighted this resilience. While Nifty 50 earnings growth remained in the mid-single digits (around 4-7%), the broader market reporting double-digit earnings growth of 14-16%, led by BFSI, telecom, automobiles, metals and industrials.
- Importantly, earnings expectations remain constructive despite macro uncertainties. Estimates continue to project double-digit earnings growth, with Nifty earnings expected to grow nearly 18% in FY27 and 14% in FY28, indicating confidence in a broad-based earnings recovery.
- Additionally, valuation comfort has also improved following the recent correction. The Nifty 50 is trading at around 18.5-19x forward earnings, below historical averages.

Our Recommendations: Given the prevailing geopolitical and macro uncertainties, investors may consider staggering fresh investments over the next 3-4 months to better navigate market volatility. Investors may consider maintaining a core allocation to Large Cap Funds, complemented by Flexi Cap Funds and Multi Cap Funds and initiate a SIP in Small Cap Funds to participate in the broader earnings recovery. Additionally, for those seeking a more balanced approach, Balanced Advantage Funds and Multi Asset Allocation Funds remain suitable options due to their ability to dynamically manage risk across asset classes.

Source: RBI. Data as on 28th May 2026.

- India's banking system currently remains flush with liquidity, anchoring short-term interest rates and reinforcing the RBI's growth-supportive stance.
- Notably, the central bank has so far refrained from aggressive liquidity absorption, signaling its preference to stay supportive of economic growth.

- April Consumer Price Index (CPI) inflation inched up to 3.5% YoY from 3.4% in March, largely due to higher food prices.
- Despite this, core inflation remained stable at 3.3% YoY, suggesting underlying demand pressures are still contained.
- Looking ahead, medium-term inflation risks are rising amid elevated crude oil prices, imported inflation pressures, and increasing producer costs, which could gradually feed into consumer prices and constrain further policy easing by the RBI.

India Inflation Rates

Source: MOSPI. Data as on 30th April 2026 as per the latest available.

Debt Outlook

- Fixed income markets have entered a phase of adjustment as elevated crude oil prices, geopolitical tensions in West Asia and currency volatility have led investors to reassess the inflation and interest rate outlook. This has resulted in a meaningful rise in short-term yields, improving accrual opportunities across money market and low-duration segments.
- While these developments have increased near-term uncertainty, the RBI's policy stance continues to indicate a preference for supporting growth and maintaining relative financial stability. Despite pressure on the rupee and higher oil prices, the central bank has continued to inject liquidity into the system, suggesting that it does not currently view interest rate hikes as the primary tool for addressing the prevailing challenges.
- Currency weakness is largely being driven by capital flow dynamics and higher crude oil imports rather than excess domestic demand. Consequently, foreign exchange intervention and liquidity management are likely to remain the first line of defence for containing volatility, supported by India's healthy foreign exchange reserve position.
- That said, elevated crude oil prices and a weaker rupee could create imported inflation pressures over the coming quarters. While markets have started factoring in the possibility of policy tightening later in FY27 if inflation remains elevated, the near-term focus is expected to remain on balancing growth, inflation and currency stability rather than pursuing aggressive rate action.
- Against this backdrop, higher yields have improved the carry available in fixed income portfolios, while debt continues to provide diversification benefits and relative stability amid uncertainty across global markets.

Our Recommendations: Investors may consider Liquid Funds, Money Market Funds and Low Duration Funds for parking money. Investors with relatively longer investment horizons may evaluate Banking & PSU Funds as part of their overall asset allocation strategy.

HOW TO READ A MUTUAL FUND FACTSHEET?

-  **Fund Manager:** An employee of an asset management company such as mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.
-  **Application amount for fresh subscription:** This is the minimum investment amount for a new investor entering in a mutual fund scheme.
-  **Minimum Additional Amount:** This is the minimum investment amount for an existing investor in a mutual fund scheme.
-  **SIP:** Systematic Investment Plan (SIP) is an organized way of investing in Mutual Fund. It helps in building long term wealth through a disciplined approach of investing at pre-defined intervals ranging from daily, weekly, monthly and quarterly.
-  **NAV:** Net asset value or NAV is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day and it is the value at which investors enter or exit the mutual fund.
-  **Benchmark:** A group of securities, typically a market index, whose performance is used as a standard or benchmark to assess the performance of mutual funds and other investments. A few common benchmarks are the Nifty, Sensex, BSE 200, BSE 500, and 10-year Gsec.
-  **Entry Load:** To compensate the distributor or agent, a mutual fund may impose a sales charge or load at the time of entry and/or exit. A mutual fund's entry load is charged when an investor buys its units. Note: SEBI Master Circular for Mutual Funds dated May 19, 2023 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.
-  **Exit load:** When an investor redeems mutual fund units, exit load is charged. At redemption, the exit load is subtracted from the current NAV.
-  **Standard deviation:** Standard deviation is statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.
-  **Sharpe Ratio:** The Sharpe Ratio is measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
-  **Beta:** Beta is a measure of an investment's volatility vis-à-vis the market. A beta of greater than 1 implies that the security's price will be more volatile than the market. Beta of less than 1 means that the security will be less volatile than the market.
-  **Jensen's Alpha:** Measures a fund's excess return compared to its expected return based on market risk (Beta), indicating the manager's skill.
-  **Information Ratio:** Evaluates the risk-adjusted return of a fund compared to a benchmark, highlighting consistency in outperformance.
-  **AUM:** Assets under management or AUM refers to the recent cumulative market value of investments managed by Mutual fund or any investment firm.
-  **Holdings:** The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.
-  **Nature of Scheme:** The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.
-  **Rating Profile:** Mutual funds invest in securities after evaluating their credit worthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their rating becomes the rating profile of the fund. Typically, this is a feature of debt funds.
-  **Macaulay Duration:** Macaulay Duration is a measure of how long it takes for the price of a bond to be repaid by its internal cash flows. Macaulay Duration is used only for an instrument with fixed cash flows. Modified Duration as the name suggests, is a modified version of the Macaulay model that accounts for changing interest rates.
-  **Modified Duration:** Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.
-  **Average Maturity:** A bond's maturity date indicates the specific future date on which an investor gets his principal back i.e. the borrowed amount is repaid in full. Average Maturity is the weighted average of all the current maturities of the debt securities held in the fund.
-  **Yield to Maturity:** The yield to maturity or the YTM is the rate of return anticipated on a bond if held until maturity. It is expressed as an annual rate. The YTM factors in the bond's current market price, par value, couple interest rate and time to maturity
-  **IDCW:** Income Distribution cum Capital Withdrawal option or IDCW can be distributed out of investors' capital (Equalization Reserve), which is part of the sale price that represents realized gains.
-  **P/E Ratio:** The price-earnings ratio (P/E Ratio) is the relation between a company's share price and earnings per share (EPS). It denotes what the market is willing to pay for a company's profits.
-  **P/BV:** The price-to-book ratio compares a company's market value to its book value. The market value of a company is its share price multiplied by the number of outstanding shares.
-  **IDCW Yield:** The dividend yield is a financial ratio that shows how much a company pays out in dividends each year relative to its stock price.
-  **Interest Rate Swap (IRS):** An interest rate swap is a forward contract in which one stream of future interest payments is exchanged for another based on a specified principal amount. Interest rate swaps usually involve the exchange of a fixed interest rate for a floating rate, or vice versa, to reduce or increase exposure to fluctuations in interest rates.
-  **Potential Risk Class (PRC) Matrix:** In reference to SEBI Master Circular for Mutual Funds dated May 19, 2023, all debt schemes will be classified in terms of a Potential Risk Class matrix which consists of parameters based on maximum interest rate risk (measured by Macaulay Duration (MD) of the scheme) and maximum credit risk (measured by Credit Risk Value (CRV) of the scheme).

Bajaj Finserv Large Cap Fund reflects a balanced yet growth-oriented approach with a strong emphasis on market leaders across diversified sectors. The core thesis focuses on long-term sustainability and market dominance.

Blue-chip stock allocation

Preference for established market players with potential for returns in long term, even in volatile conditions.

Pharmaceuticals & insurance exposure

Highlights belief in healthcare and financial protection as critical for navigating uncertainties and sectoral resilience.

Consumer staples & telecom presence

Indicates belief in steady cash flow generation due to recurring demand, regardless of market disruptions.

Digital economy exposure

Reflects optimism in India's tech-driven transformation and future growth potential.

The fund's portfolio is strategically constructed on the back of high conviction investment ideas. Furthermore, the overall philosophy revolves around balancing defensive plays with selective growth opportunities, underpinned by quality, market leadership, and sectoral resilience.

The sequence, relationship and nature of trends in these assets helps understand and anticipate market movements driven by psychological factors, leading to more informed and effective investment decisions. By integrating behavioural insights with fundamental analysis, our model offers a comprehensive approach to asset allocation, optimizing returns while managing risks.

Active Share measures the percentage of stock holdings, based on weights (% to NAV) in a investment manager's portfolio that differs from the benchmark index.

- A low Active Share score is said to indicate that a portfolio manager is closely replicating the benchmark index and engaging in a passive investment strategy.
- A high Active Share score is said to indicate that a fund's holdings differ from the benchmark index and that the portfolio manager is actively managing it.

Active Share : 47%

Portfolio Overlap: 53%

Data as on 31st May 2026 | *Internal Analysis | *Market capitalisation is currently unavailable for these entities following the demerger from Vedanta. They are yet to be listed.

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Bajaj Finserv Flexi Cap Fund

An open ended equity scheme investing across large cap, mid cap, small cap stocks.

INVESTMENT OBJECTIVE

To generate long term capital appreciation by investing predominantly in equity and equity related instruments across market capitalisation. However, There is no assurance that the investment objective of the Scheme will be achieved.

■ Portfolio Allocation
 ■ Increased Portfolio Allocation
 ■ Decreased Portfolio Allocation

Combining fundamental and behavioural finance principles provides a key advantage in managing investments. Our proprietary asset allocation model at Bajaj Finserv AMC is based on those two elements namely: fundamental analysis and behavioural insights. It ensures that our Balanced Advantage Fund is well-positioned to navigate market complexities and deliver long-term value to our investors. By understanding the interplay of various market factors, we can make informed decisions that align with our investors' goals, fostering financial growth and stability. This unique approach helps us determine the optimal asset allocation between equity and debt, providing an edge for our investors.

Fundamental Indicator:

Our fundamental indicator focuses on the Nifty 50 Index, analysing its ideal earnings and valuations. Ideal earnings are forward-looking estimations, while ideal valuations are comparative, offering a realistic assessment rather than absolute measures. This robust analysis forms the backbone of our model, ensuring a sound foundation for asset allocation.

Behavioural Indicator:

The differentiation in our model lies in the behavioural indicator, which measures behavioural and sentimental trends in the market by monitoring four key factors: **currencies, commodities, bonds, and equities**. Let's explore how each of these factors contributes to our asset allocation strategy:

- Reflect risk appetite.
- Risky currencies signal optimism; safe havens show caution.
- Helps predict capital flows into Indian equities.

- Rising prices = strong economy; precious metals up = uncertainty.
- Guides sector allocation (energy, industrials) based on economic cycles.

- Yield spreads & curves show investor sentiment and liquidity.
- Narrowing spreads = confidence, steep curve = growth expectations.
- Guides equity investment in growth sectors.

- Large-cap focus = stability; small/mid-caps = higher risk.
- Sector rotations signal where investors see growth or safety.
- Informs strategic asset allocation.

The sequence, relationship and nature of trends in these assets helps understand and anticipate market movements driven by psychological factors, leading to more informed and effective investment decisions. By integrating behavioural insights with fundamental analysis, our model offers a comprehensive approach to asset allocation, optimizing returns while managing risks.

Data as on 31st May 2026

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Bajaj Finserv Multi Asset Allocation Fund

An open ended scheme investing in equity and equity related instruments, debt & debt derivatives and money market instruments, Gold ETFs, Silver ETFs, exchange traded commodity derivatives and in units of REITs and InvITs.

Bajaj Finserv Low Duration Fund

An open ended low duration debt scheme investing in instruments such that the Macaulay Duration of the portfolio is between 6 months to 12 months (please refer to page no. 34 of the SID)# with relatively high interest rate risk and moderate credit risk. #Please refer to the page number of the Scheme Information Document on which the concept of Macaulay Duration has been explained.

INVESTMENT OBJECTIVE

The investment objective of the Scheme is to generate optimal returns for its investors through a portfolio constituted of debt and money market securities. The Macaulay duration of the portfolio is managed between 6 months and 12 months, resulting in a low duration investment with relatively high interest rate risk and moderate credit risk. The Scheme seeks to offer a short-term savings avenue with low risk while balancing yield and liquidity. However, there is no assurance that the investment objective of the Scheme will be achieved.

Bajaj Finserv Nifty 50 Index Fund

An open ended scheme tracking Nifty 50 Index.

INVESTMENT OBJECTIVE

An open ended index linked growth scheme seeking to replicate the returns of the Nifty 50 through investments in a basket of stocks drawn from the constituents of the Nifty 50 index. The objective of the Scheme is to invest in companies whose securities are included in the Nifty 50 Index and subject to tracking errors, to endeavor to achieve the returns of the Nifty 50 Index. This would be done by investing in all the stocks comprising Nifty 50 in approximately the same weightage that they represent in Nifty 50. The Scheme will not seek to outperform the Nifty 50 or to underperform it. The objective is that the performance of the NAV of the Scheme should track the performance of the Nifty 50 over the same period. However, there is no assurance that the investment objective of the Scheme will be achieved.
